07 LAUNCH DETAILS

MARKET CAP

Fully Diluted Market Cap

\$100,000,000

This is calculated by multiplying the maximum total supply of 10,000,000,000 BG tokens by the public listing price of \$0.01 per token.

Circulating Market Cap (Non-Diluted)

\$3,400,000

This is calculated by multiplying the number of tokens in circulation at TGE by the public listing price of \$0.01. The circulating supply at TGE consists only of tokens from the "Public IDO / CEX" sale round, as all other sale and internal allocations are locked behind a cliff period.

11 ADDITIONAL INFO

RELAUNCH

Blink Galaxy is relaunching due to:

- The order flow, liquidity placement, and price corridor around listing did not follow what they had agreed
- The market-making behavior they observed destroyed price integrity within hours, instead of building a stable corridor where organic demand could form
- The end result was a launch that looked nothing like the structure they had designed and communicated to partners

There will be no airdrops
because pre-seed and seed allocations remain fully locked until 2027

The team is claiming they will not repeat the mistake:

- they are terminating any dependency on partners whose execution they no longer trust
- restructuring market-making strategy
- being more selective with CEX listings
